SASHO ABDULRAHIM DERAMA

AI PRODUCT ENGINEER | SOFTWARE PLATFORMS | AUTOMATION

Sofia, Bulgaria | sashoderama@gmail.com | 0886 548 061
github.com/gonzo-max2 | Portfolio | MAYA case study

PROFESSIONAL PROFILE / *Product thinking, engineering depth, operational judgement*

Product-focused engineer and systems builder creating AI-enabled, operational and real-time software.

Brings together product direction and hands-on implementation across Python/FastAPI, React/TypeScript, Tauri/Rust, C++/JUCE, Linux, Docker and SQLite. Work is shaped by explicit trust boundaries, observable state, recovery and clear operator control.

TARGET AREAS
- **AI products**
- **Digital platforms**
- **Automation**
- **Observability**
- **Software engineering**

CORE EXPERTISE / *A focused, recruiter-readable capability map*

AI & AUTOMATION AI-assisted workflows, structured tools, product automation, human approvals	**PLATFORM ENGINEERING** APIs, native gateways, state, persistence, recovery	**FULL-STACK DELIVERY** React/TypeScript, Python/FastAPI, Tauri/Rust, SQL
RELIABILITY Health, diagnostics, failure handling, verification, rollback	**SECURITY & TRUST** Access control, confinement, secret redaction, privacy	**PRODUCT EXECUTION** Architecture, acceptance criteria, operational UX, communication

INDEPENDENT PRODUCT ENGINEERING / *Selected work*

MAYA — Codex Nexus
Independent Product Creator / AI Product Engineer

2026 – PRESENT
PUBLIC CASE STUDY

Local-first autonomous engineering workbench designed around operator control, safe execution and evidence-backed outcomes.

- Directed the product and implementation across desktop, web and backend experiences.
- Designed a clear workflow from instruction and context through approval, active work, review and recovery.
- Built durable project state, isolated workspaces, task orchestration, rollback support and visible health experiences.
- Kept automation advisory: sensitive actions remain governed by explicit rules and operator authority.

Aegis / Proofflow
Local-first agent execution and operations platform

PUBLIC ALPHA
GITHUB SOURCE

Governed automation layer focused on permissions, approvals, reversibility and recovery.

- Created one policy-owned execution layer behind terminal and web interfaces.
- Implemented confined tools, human approvals, cancellable commands and reversible file changes.
- Added persistent sessions, audit history, checkpoints, diagnostics and resumable workflows.

Nova Visual Studio
Visual software engineering / transactional change-control prototype

INDEPENDENT PROTOTYPE

Source-aware visual engineering environment for turning design intent into inspectable code changes while preserving the repository as authority.

- Designed a local Browser Studio that inspects real components, styles and live product state.
- Structured changes as isolated candidates with diffs, previews and visual evidence.
- Used transaction-style validation, atomic application and rollback instead of opaque rewrites.

PROFESSIONAL EXPERIENCE / *Trust, data quality and customer operations*

Google Account Recovery Agent | Security-sensitive user support / prior experience

- Handled identity and access recovery cases where privacy, procedural accuracy, abuse prevention and account safety were central.
- Assessed ownership evidence, separated routine recovery from higher-risk scenarios and escalated when authority was insufficient.
- Documented decisions and communicated outcomes without exposing sensitive internal or user data.

Engineering relevance: trust-boundary design, human approval controls, least-authority execution and privacy-aware operational UX.

eBay Catalog Agent | Catalog operations and data quality / prior experience

- Created and maintained structured product records across categories, attributes, identifiers and variants.
- Normalized inconsistent source data into controlled taxonomy and schema fields, improving clarity and searchability.
- Resolved duplicates, conflicts and missing data through repeatable quality checks and disciplined escalation.

Engineering relevance: schema discipline, validation, entity resolution, provenance, search quality and exception handling.

SELECTED PROJECTS / *Cross-domain product and engineering range*

Nova Visual Studio Source-backed visual engineering prototype for isolated candidate changes, runnable previews and atomic apply/rollback. **React · TypeScript · semantic AST · Git isolation**	**DERAMA Studio** Native DAW and VST platform built around hard-real-time audio, performance-sensitive UI and modular production workflows. **C++23 · JUCE · DSP · CMake/Ninja**
Vozime / TripCab Mobility platform with deterministic trip state, real-time interaction, payments, notifications and recovery-aware UX. **React Native · Expo · TypeScript**	**UI_DEBUG_MCP_PRO** UI diagnostics automation for application errors, accessibility, authentication and network quality evidence. **Playwright · Accessibility · CI**
AETHER RF Sense Real-input telemetry research with acquisition health, calibration, confidence and real-time visualization. **Python · RF telemetry · signal processing**	**Blockchain-related systems** Project experience informing durable-state design, provenance, adversarial thinking and irreversible-action controls. **State · provenance · verification · risk**

TECHNICAL TOOLKIT / *Practical working stack*

ENGINEERING Python, FastAPI, Pydantic, TypeScript, React, React Native/Expo, SQL	**NATIVE & REAL-TIME** Tauri 2, Rust working knowledge, C++23, JUCE, CMake, Ninja
AI & AUTOMATION AI-assisted workflows, structured tools, automation design, human approvals	**PLATFORMS** Linux, Docker, Git, GitHub Actions, SSH, SQLite, REST, SSE, WebSockets
QUALITY pytest, Vitest, Playwright, Ruff, ESLint, TypeScript, accessibility	**LANGUAGES** Bulgarian (native), English (professional)

WORKING METHOD / *A repeatable path from intent to reliable outcome*

01 **FRAME** Objective and authority	**02** **MAP** Architecture and state	**03** **BUILD** Typed, real integrations	**04** **OBSERVE** Health and diagnostics	**05** **VERIFY** Behavior and outcomes	**06** **RECOVER** Rollback and next action

PRODUCT DIRECTION · CLEAR AUTHORITY · RELIABLE EXECUTION · VISIBLE OUTCOMES
